## Development of Language through the Lens of Formal Linguistics

P. Karlík (ed.)  
 Masaryk University

Formal approaches to language are typically associated with synchronic linguistics whereas diachronic linguistics is connected with traditional philological methods. The goal of this book is to demonstrate that formal-linguistic analyses of diachronic language data can not only represent known facts in a new light, but also reveal new facts that have remained hidden to traditional philology. Particular studies, whose authors are linguists from distinguished European and American universities, analyze various phonological, morphological, syntactical and semantic phenomena, in typologically and genetically diverse languages.
